

Product Change Notice

Notice: # BE100920

Date: 20-Sep-2010

To Our Valued Customers:

We appreciate your use of Vicor Brick Business Unit products. Our commitment to customer satisfaction is demonstrated by our notification to you of the following change.

Description:

This notification is to inform you that Vicor has changed to an all plastic cover on its Maxi, Mini and Micro series of DC-DC converters and Front End and Filter modules. See photos below of the current cover design and the new version. The new cover retains the aluminum shield that was visible on the older cover, but is now located to the interior.

This change improves manufacturability of the modules and is more robust and durable than the previous versions.

Products Affected:

- Maxi, Mini and Micro DC-DC Converters
- FARM, FIAM, M-FIAM, MiniHAM and MicroRAM modules

Effective Dates

Beginning in October, the new covers will be phased in over several weeks. Over the next quarter, customers may receive modules with both styles of covers.

Action Required:

No changes to form, fit, function or specifications have occurred with the products. Customers may need to update illustrations in their documentation and incoming inspection.

Qualification Summary:

The new covers have been put through extensive qualification testing to ensure that they meet or exceed the performance of the previous covers.
